

TORO®

Fixed-spray

Sprinklers

Make every drop count. Toro's 570Z and 570Z PRX fixed-spray sprinklers produce a tight, constant fan of water ideal for small landscape designs. Pop-up models retract when not in use, so they're safe for the kids and even the mower. Toro's MPR (Matched Precipitation Rate) Plus nozzles deliver even coverage across the entire area. Toro's Variable Arc Nozzles (TVANs) offer complete flexibility. These nozzles are designed to conserve water, one of our most precious natural resources.

Count on it.

Homeowners have trusted the Toro name for more than 85 years. Toro products mow our lawns, trim our hedges and clear our walks. Count on Toro sprinkler components for quality assurance, season after season.

Professional products require professional installation.

The performance of an automatic sprinkler system is only as good as the professional who installs it. A quality contractor ensures long-lasting, efficient operation of your system. Choose a licensed professional with an established reputation and solid references. All materials and workmanship should be covered by a warranty.

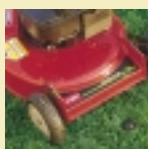

TORO® 570Z Series and 570Z PRX Series Sprinklers

570Z Series sprinklers are ideal for small landscape areas and intricate designs. Seven distinct pop-up bodies provide coverage for all your watering needs. 570Z Series provides unlimited design flexibility and ensure precise and uniform water application.

Water conservation made easy.

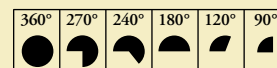

570Z PRX Series sprinklers are the only one of its kind to have X-Flow™. With this high-flow shut-off device built into the riser, it restricts water loss by 98% if the nozzle is removed. That equates to a swimming pool full of water a year.

They pop down for safety.

Pop-up models retract when not in use, so they're safe for the kids and even the mower.

With MPR nozzles, there is a complete selection of arc patterns, including:

TVANs offer adjustable flexibility:

The right placement for precise, even coverage.

Automatic sprinkler systems are designed for precise, even coverage without gaps or runoff. Sprinklers are placed so that the spray from one reaches the next, as shown in the diagram above.

Features

- Choice of nozzle patterns
- 570Z Series radius: 0'–17'
- 570Z PRX Series radius: 0'–15'
- Wide selection of spray radius options:
 - MPR Nozzles—5', 8', 10', 12' and 15'
 - TVANs—8', 10', 12', 15' and 17'
- Shrub, 2", 3", 4", 6" and 12" bodies available with 570Z Series
- Shrub, 4", 6" and 12" bodies available with 570Z PRX Series
- Operating pressure range: 20–50 psi
- Optimum nozzle performance at 30 psi
